SUMMARY

Enterprise Solutions Engineer and former full-stack engineer with 10+ years across software engineering, solution architecture, and technical pre-sales. Supported ~\$2.1M in pipeline and ~\$640K in closed-won ARR at Trackunit, with prior experience supporting \$150K-\$750K enterprise evaluations. Combines hands-on AI/cloud engineering with customer-facing architecture, technical discovery, POCs, integrations, and executive-level solution communication.

WORK EXPERIENCE

SALES ENGINEER | Trackunit (Remote)

May 2026 - Present

- Lead technical discovery, feasibility, solution design, and POC execution across ~38 opportunities / 17 accounts representing ~\$2.1M in pipeline; supported ~\$640K in closed-won ARR.
- Root-caused a months-long ERP + telematics integration failure and diagnosed third-party API issues live with customers, restoring stalled evaluations and implementation progress.
- Translate complex API, data, and device requirements into solution architectures, integration plans, success criteria, RFP responses, and product feedback for OEM and channel stakeholders.

SALES SOLUTIONS ENGINEER | Everspring Partners (Remote)

Dec 2020 - May 2026

- Partnered with AEs on \$150K-\$750K enterprise opportunities; discovery → solution design → tailored demos/POCs reduced evaluation cycles from 45 → 28 days and increased close rates by ~30%.
- Spearheaded technical rollout of VIA (AI-powered learning automation), building demo environments and delivering proof-of-value for enterprise stakeholders.
- Built AWS infrastructure-as-code pipelines that launched POC environments in <1 hour; led security/RFP responses and architecture recommendations for enterprise evaluations.

SENIOR SOFTWARE ENGINEER | U-Haul Amerco (Phoenix, AZ)

Feb 2019 - Dec 2020

- Shipped end-to-end React and Java features, integrations, and production releases for Truck Sales in a high-visibility business area.

SOFTWARE ENGINEER | BBVA USA Bank (Birmingham, AL)

Nov 2015 - Feb 2019

- Built secure online banking and account-opening flows with Java/Spring, AngularJS/jQuery, and service integrations.

PROJECTS

SonaSteps - AI-Powered Multilingual Learning Platform

Product + Engineering Lead

- Built and deployed a production-style AI platform using RAG, semantic/vector search, agentic workflows, personalized recommendations, grounded responses with citations, auth/RBAC, APIs/webhooks, AI evaluation/guardrails, LLM observability, CI/CD, and AWS deployment.

Club Swan - Prepaid Card → NFT "Digital Twin" System

Technical Lead

- Co-led an event-driven purchase-to-ERC-721 architecture spanning validation, mint authorization, idempotency, on-chain minting, metadata/IPFS, wallet flows, and retry/failure handling across blockchain and application teams.

EDUCATION / CERTIFICATIONS / SKILLS

Education: M.S. Artificial Intelligence, University of the Cumberland (Jan 2027 - Present) • Bachelors Computer Science, Thomas Edison State University

Certifications: AWS Certified Solutions Architect - Professional • AWS Certified Solutions Architect - Associate • IBM Generative AI Engineering Professional Certificate • Demo2Win

Skills: RAG • Agentic AI • Vector Search • AI Evaluation/Guardrails • LLM Observability • REST/GraphQL/Webhooks • OAuth/OIDC/SAML • System Design • Event-Driven Systems • AWS • Terraform • Docker • CI/CD • Python/FastAPI • TypeScript/React • Java/Spring • SQL • Solution Architecture • Technical Discovery • POC/POV • Demo Storytelling • Technical Objection Handling • RFP/RFI & Security Questionnaires • BigData • iPaaS / Enterprise Integration • Integration Architecture
